

MONO BLOCK

CLASS-A MONAURAL POWER AMPLIFIER

A 200 Watts true Class-A operation

↻ Precision speaker control through innovative feedback concept

~ Smart PCBA's and mechanical architecture

"The Blocks behaved very neutrally, like two boulders on the sides of the speakers. And what does such a good boulder do? You can kick it, you can be angry with it, you can beg or cry, and it won't budge. A Block cannot be persuaded to play something that isn't on the player - and to be honest, I couldn't trick him with anything..."

MJ AUDIODROM

Features

- 200 Watts true Class-A operation
- Smart PCBA's and mechanical architecture allow shortest audio signal and power supply paths without any internal wiring
- Precision speaker control through innovative feedback concept
- All discrete audio circuitry
- DC signal coupling with Servo-Control
- 2 500 VA custom made low-noise and low-radiation toroidal transformer
- Decoupled and suspended mount transformer case
- 500 000 μ F of power supply-filter capacitance (per channel)
- Thermally coupled rectifiers
- Adjustable feet with integrated spikes
- Separate power supply for control and protection circuits
- Standby with zero power consumption
- Reversible protection system and Distortion-rise indication
- User-selectable Eco/Auto Eco bias mode
- User-selectable Auto Power Off mode
- Status/Error indications
- Brightness controlled* front status LED
- System remote control and temperature displaying*

* works only in combination with the appropriate BLOCK AUDIO Preamplifier
